

Accessible Fonts & Colors Cheat Sheet

Goal: Build a readable, calm, and accessible Jekyll portfolio.

Fonts

- 1 Use max 2 fonts (body + headings).
- 2 Body font size $\geq 16\text{px}$.
- 3 Line-height: 1.5–1.7.
- 4 Prefer neutral fonts (Inter, Source Sans 3, system-ui).
- 5 Avoid light, condensed, or decorative fonts for body text.

Colors

- 1 Normal text contrast $\geq 4.5:1$.
- 2 Large text contrast $\geq 3:1$.
- 3 Do not rely on color alone to convey meaning.
- 4 Limit palette: background, text, accent, muted.
- 5 Avoid pure black (#000) and pure white (#fff).

Interaction & UI

- 1 Never remove focus outlines without replacement.
- 2 Ensure hover, focus, and active states are visible.
- 3 Links should be distinguishable without color alone.

Jekyll / SCSS Workflow

- 1 Define font + base text color first.
- 2 Put variables in `_sass/_variables.scss`.
- 3 Set typography in `_sass/_base.scss`.
- 4 Apply accents later to links and buttons.
