

Sass Learning Map & Template Design Review Plan

This document is tailored to the provided Jekyll + Sass project structure.

It is intended to be used as a **living reference** while learning, refactoring, and reviewing the design system.

Part 1 — Sass Learning Map (Mental Model Diagram)

3-modules (COMPONENTS)

`_buttons.scss`
`_footer.scss`
`_pagination.scss`

- ❖ Reusable UI blocks
- ❖ Maps directly to `_includes` HTML

4-layouts (PAGE CONTEXT)

`_home.scss`
`_post.scss`
`_page.scss`
`_tags.scss`

- ❖ Page-specific composition
- ❖ Overrides modules where needed

5-trumps (OVERRIDES)

`_helpers.scss`

- ❖ Utility & helper classes
- ❖ Highest specificity

Part 2 — Template Design & Review Plan

A. Design System Review

Design Tokens

— Colors	→ _sass/0-settings/_colors.scss
— Typography	→ _sass/0-settings/_global.scss
— Spacing	→ _sass/0-settings/_global.scss
— Breakpoints	→ _sass/1-tools/_mixins.scss

Review Goals:

- Consistent naming
- Limited palette
- Predictable spacing scale
- Single font system

B. Global Structure Review

HTML Skeleton

— _layouts/default.html	
— <head>	→ _includes/head.html
— <header>	→ _includes/header.html
— content	→ layout-specific
— <footer>	→ _includes/footer.html

Review Goals:

- Semantic HTML
- Minimal wrapper divs
- Clear content hierarchy

C. Component Review Matrix

Component	HTML Include	Sass Module
Buttons	post-card.html	_buttons.scss
Footer	footer.html	_footer.scss
Pagination	pagination.html	_pagination.scss
Post Card	post-card.html	_post.scss + modules

Review Goals:

- One responsibility per component
- No layout logic inside components
- Predictable class naming

D. Page-Level Review

Page Type	Layout File	Sass File
Home	index.html	_home.scss
Post	post.html	_post.scss
Page	page.html	_page.scss
Tags	tags.html	_tags.scss

Review Goals:

- Page rules do not leak globally
- Layout overrides are intentional
- Typography scales correctly per page

E. Override & Utility Review

Helpers & Trumps
└─ _sass/5-trumps/_helpers.scss

Review Goals:

- Utilities are rare
- No duplication with modules
- Used intentionally, not reactively

Part 3 — Ongoing Maintenance Checklist

- ✓ New color added → update `_colors.scss` only
- ✓ New component → add to `3-modules/`
- ✓ Page tweak → prefer `4-layouts/`
- ✓ Quick fix → verify before using helpers
- ✓ Warning seen → trace file ownership first

Part 4 — Golden Rules

- Never style without knowing where the HTML lives
- Never override without checking the cascade
- Never add utilities before understanding the module
- `_site/` is output, not source
- Sass structure reflects thinking structure

End of document.
